SUMMARY

B.Tech (CSE - AI/ML) undergraduate at VIT Chennai with a 9.47 CGPA, strong CS fundamentals, and problem-solving skills with a solid grasp of data structures and algorithms — evidenced by 480+ problems solved across competitive programming platforms. Currently a Software Development Intern at the Vicharanashala Lab for Education Design (VLED), IIT Ropar, where I own projects end-to-end — from scoping with stakeholders to delivering reliable, working solutions — including leading a team building a scalable, reliable FAQ platform. AI-native workflow: use LLMs and AI coding tools like MiniMax M2.7 to prototype fast and iterate quickly on ambiguous, self-driven problems.

EXPERIENCE

Software Development Intern (VINS)

Vicharanashala Lab for Education Design (VLED), IIT Ropar — Remote | May 2026 – Present

- Selected for the Vicharanashala Internship (VINS), an online research internship building real, scalable, reliable software for India-centric education platforms — self-driven work with real ownership under mentor guidance
- Own the PyBe project end-to-end — a scenario-driven Python learning platform — from scoping requirements with stakeholders through a PRD to delivering working features, as the internship's final-phase deliverable
- Served as Team Lead for the Crowdsourced FAQ Portal (see Projects), coordinating a team building a scalable, reliable AI-powered semantic search platform, and owning delivery end-to-end
- Use AI coding tools daily, including MiniMax M2.7 (lab-provisioned access), for code generation, debugging, and rapid prototyping — high pace, high iteration, AI-native engineering habits

EDUCATION

VIT Chennai — B.Tech, CSE (AI & ML)

Coursework: Design & Analysis of Algorithms, DBMS, OOP

2024 – 2028

CGPA: 9.47

Sri Chaitanya Jr College — Intermediate

2022 – 2024

Percentage: 97.4%

COMPETITIVE PROGRAMMING & DSA

- LeetCode: 258+ problems solved (max rating: 1537)
- Codeforces: 227+ problems solved, contest rating 1111 (max rating: 1144)
- Strong problem-solving skills with a solid grasp of core DSA: graphs, trees, hashing, divide-and-conquer, greedy, and complexity analysis — built on CS fundamentals from coursework (DAA) and 480+ solved problems combined

PROJECTS

Crowdsourced FAQ Portal — AI-Powered Knowledge Platform (Team Lead)

MERN Stack, Semantic Search, AI Moderation

- Led the team as Team Lead, owning delivery end-to-end for a FAQ platform (React/Vite frontend, Node/Express + TypeScript backend) built as a scalable, reliable community knowledge base with hybrid semantic and keyword search
- Coordinated feature scoping with stakeholders and drove features spanning the AI auto-answer pipeline (confidence-scored matching against MongoDB Atlas Vector Search) and community Q&A/moderation systems
- Implemented REST APIs with Express, Mongoose, and Zod validation, and built UI components in React with TypeScript and Tailwind CSS, while reviewing team contributions via Git-based PR workflows

Healthcare Management System — Full-Stack Web Application

React.js, FastAPI, Oracle SQL

- Built a hospital management platform with separate patient and doctor dashboards for appointments, prescriptions, lab reports, and medical records on a centralized data model
- Developed a real-time appointment booking system with slot-availability validation, secure FastAPI REST APIs, an Oracle SQL schema

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, SQL — server-side and system programming languages

Backend & Systems: Node.js/Express, FastAPI, Socket.io, Redis, node-cron, REST API design

Data & Infra: MongoDB (geospatial indexing), Oracle SQL, Docker Compose, Nginx

Frontend: React.js, HTML, CSS

Tools: Git, GitHub, VS Code, AI-assisted development (MiniMax M2.7, LLM-based coding/debugging workflows)

Core CS: Data Structures & Algorithms, DBMS, OOP
